TECH MODERNIZATION: TURNING CONSTRAINTS INTO VALUE CREATION OPPORTUNITIES

Digital & Technology Services

ALVAREZ & MARSAL

Major Drivers

Obsolescence & Cyber Risk

Obsolescence also increases costs and delays. Additionally, it poses cyber risks, hindering time to market.

IT Complexity & Cost

Fragmented systems and accumulated technical debt increase maintenance costs, slow operations, and hinders time to market.

Software Vendor Pressure

Deadlines for end-of-life software support (e.g., SAP ECC 2027-2030) forcing organizations to migrate core systems

Data & AI Limitations

Growing need to adopt true data-driven strategy to improve decision-making, efficiency and customer experience, while lowering risks

Optimize EBITDA

Accelerate value creation

Realize expected synergies

Leverage technology as an enabler for topline growth

Additional Tailwinds

- **Mandatory Digitization**
Digital-first strategies to satisfy customers, stay competitive
- **Industry Trends Evolution**
AI, automation, IoT, and cloud-based solutions reshaping business models
- **Mergers & Market Consolidation**
Scalable, integrated solutions to support cross-border operations and M&A synergies
- **Customer-Centricity Needs** Enhanced omnichannel and service models require flexible ERP
- **Regulatory & Compliance Pressure**
Stricter laws (GDPR, IFRS, SOX..) demand transparency, security, and audit-ready systems
- **Modern Tech Stack & Scalability**
Microservices & API-First, Serverless computing, Cloud adoption, Infrastructure as Code for scalability; modular architecture for agility, resilience, and efficiency
- **Best-of-Breed Disruption**
Niche SaaS solutions challenging traditional ERP dominance & speeding up time to market

A MANDATORY SHIFT
How software vendors and market dynamics are forcing companies to modernize their IT landscape

In this context, ERP projects frequently encounter failure due to misaligned decisions, excessive complexity and unrealistic expectations

Navigating ERP Implementation Challenges

Long Timelines

Projects stretch over years, causing delays and frustration

High Costs and Limited Benefits

Budgets spiral out of control due to unforeseen expenses for customization, training, and support

Organizational and Complexity Overload

Teams are overwhelmed, diverting focus from core business, while integrations and dependencies create bottlenecks and errors.

Lack of Engagement

Projects are viewed as technological rather than business-led, causing business fellows to rarely engage

Timing Challenges

Implementing GBS/SSC is difficult to time due to poor integration with IT transformation, leading to delays

Misaligned Reengineering

Process reengineering often lacks integration with tech modernization, resulting in inefficiencies

Key Reasons Leading to Implementation Failure

Inefficient Demand Management with Excessive Customizations and Misalignments

Heavily customized solutions, away from editor best practices, lead to cost slippage and delays.

Over-Democratized Decisions

Endless alignment across stakeholders slows progress and weakens outcomes.

Lack of CxO Focus and User Engagement

Without top-down steering and executive support, projects lack authority and strategic focus, hindered by poor meeting attendance and insufficient incentives.

Big Bang Go-Live

Aggressive roll-out approaches, not considering user change management and necessary training, lead to adoption issues and eventually rejection.

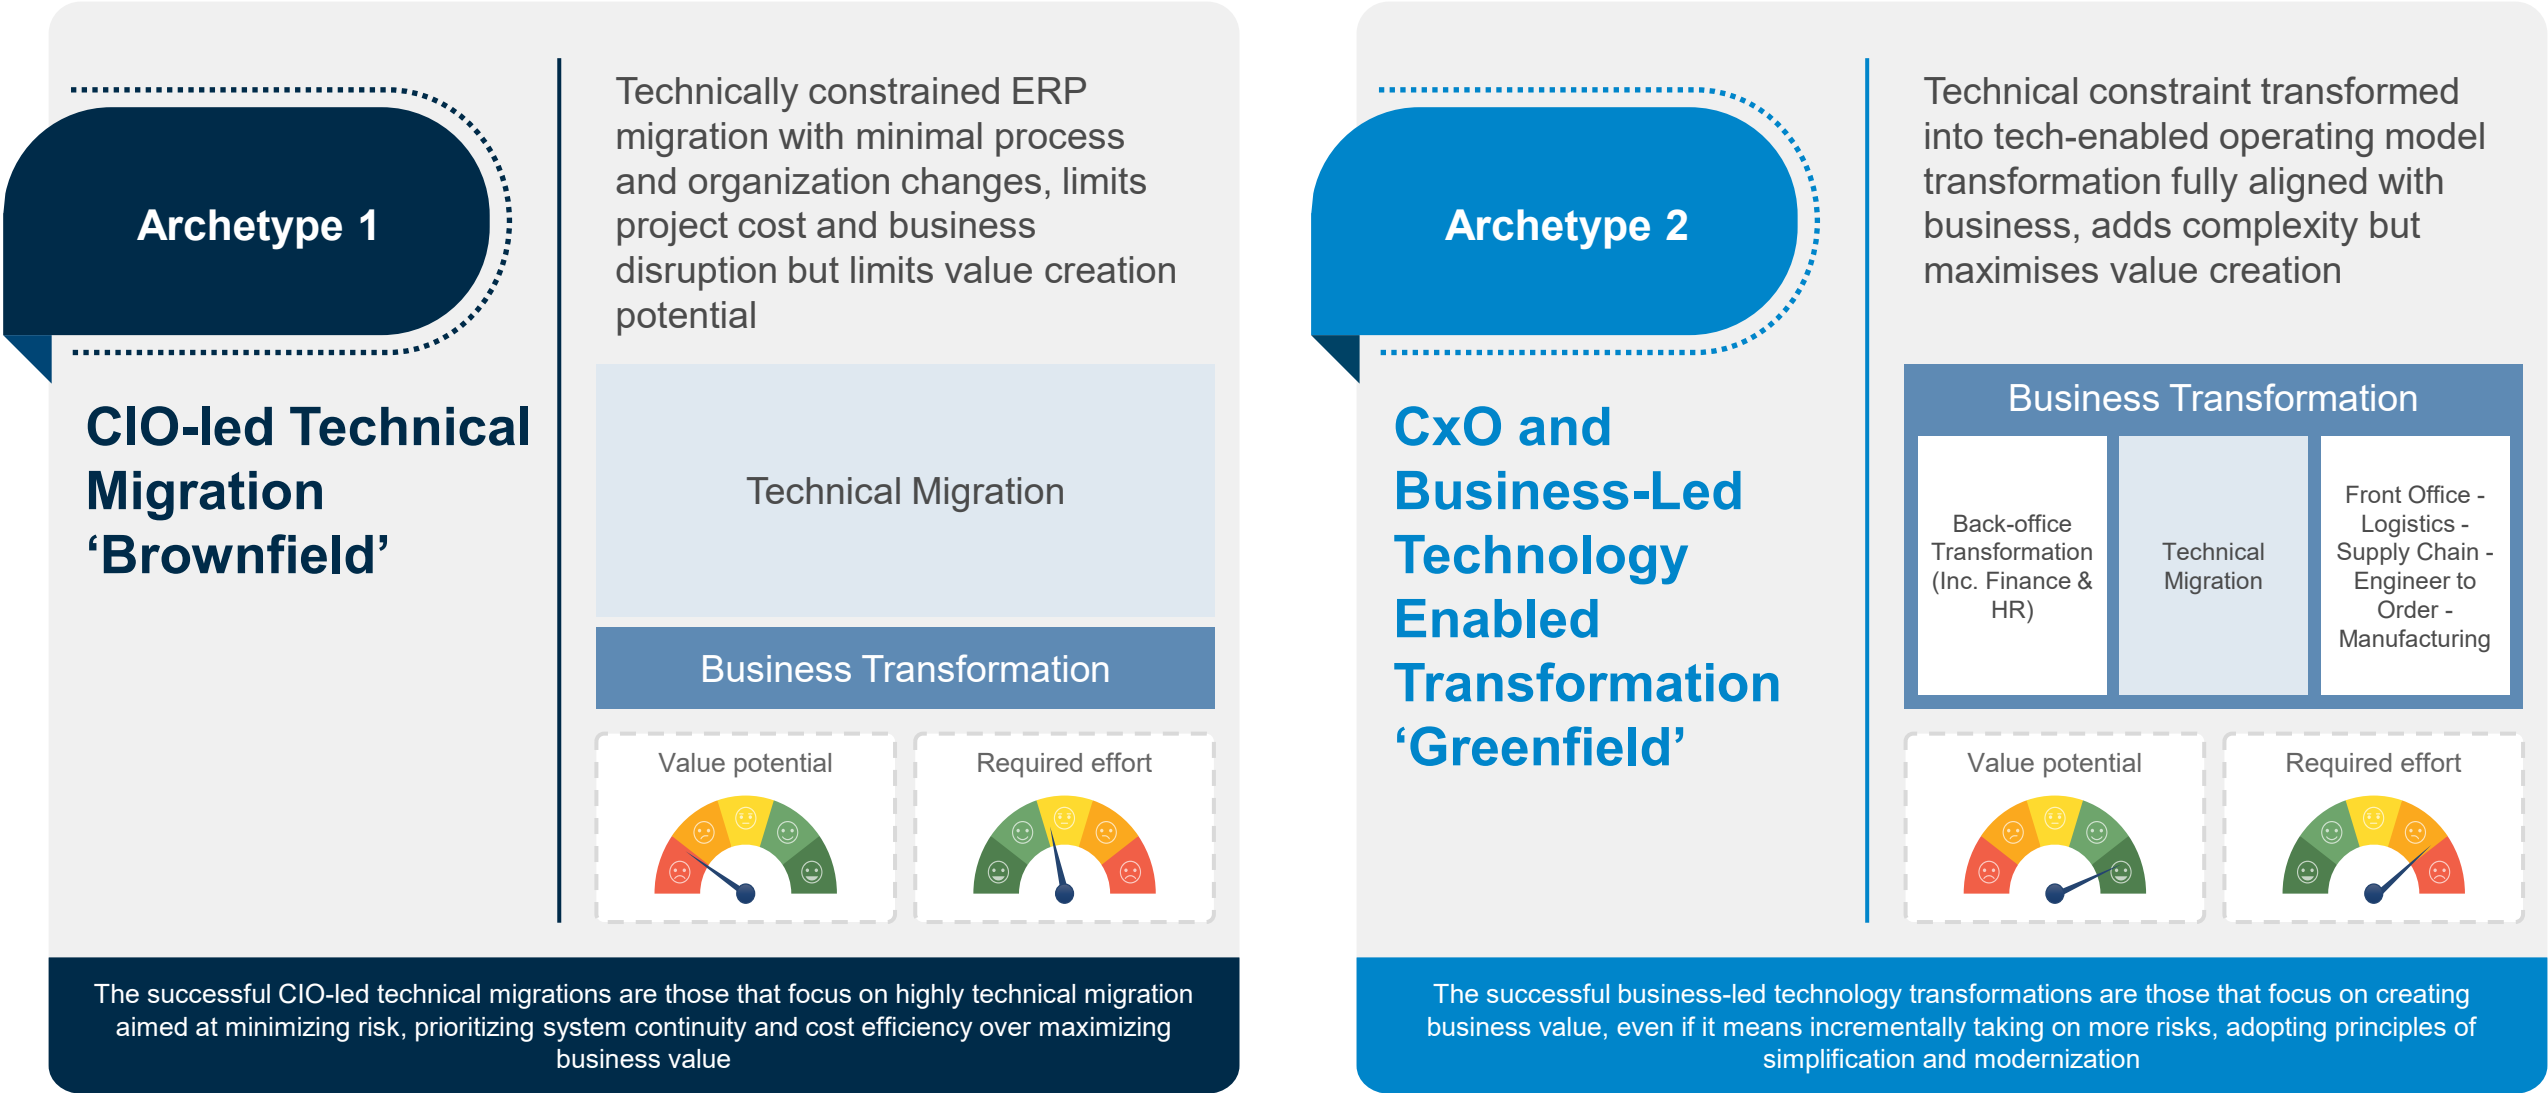

Deficient Methodology and Capabilities

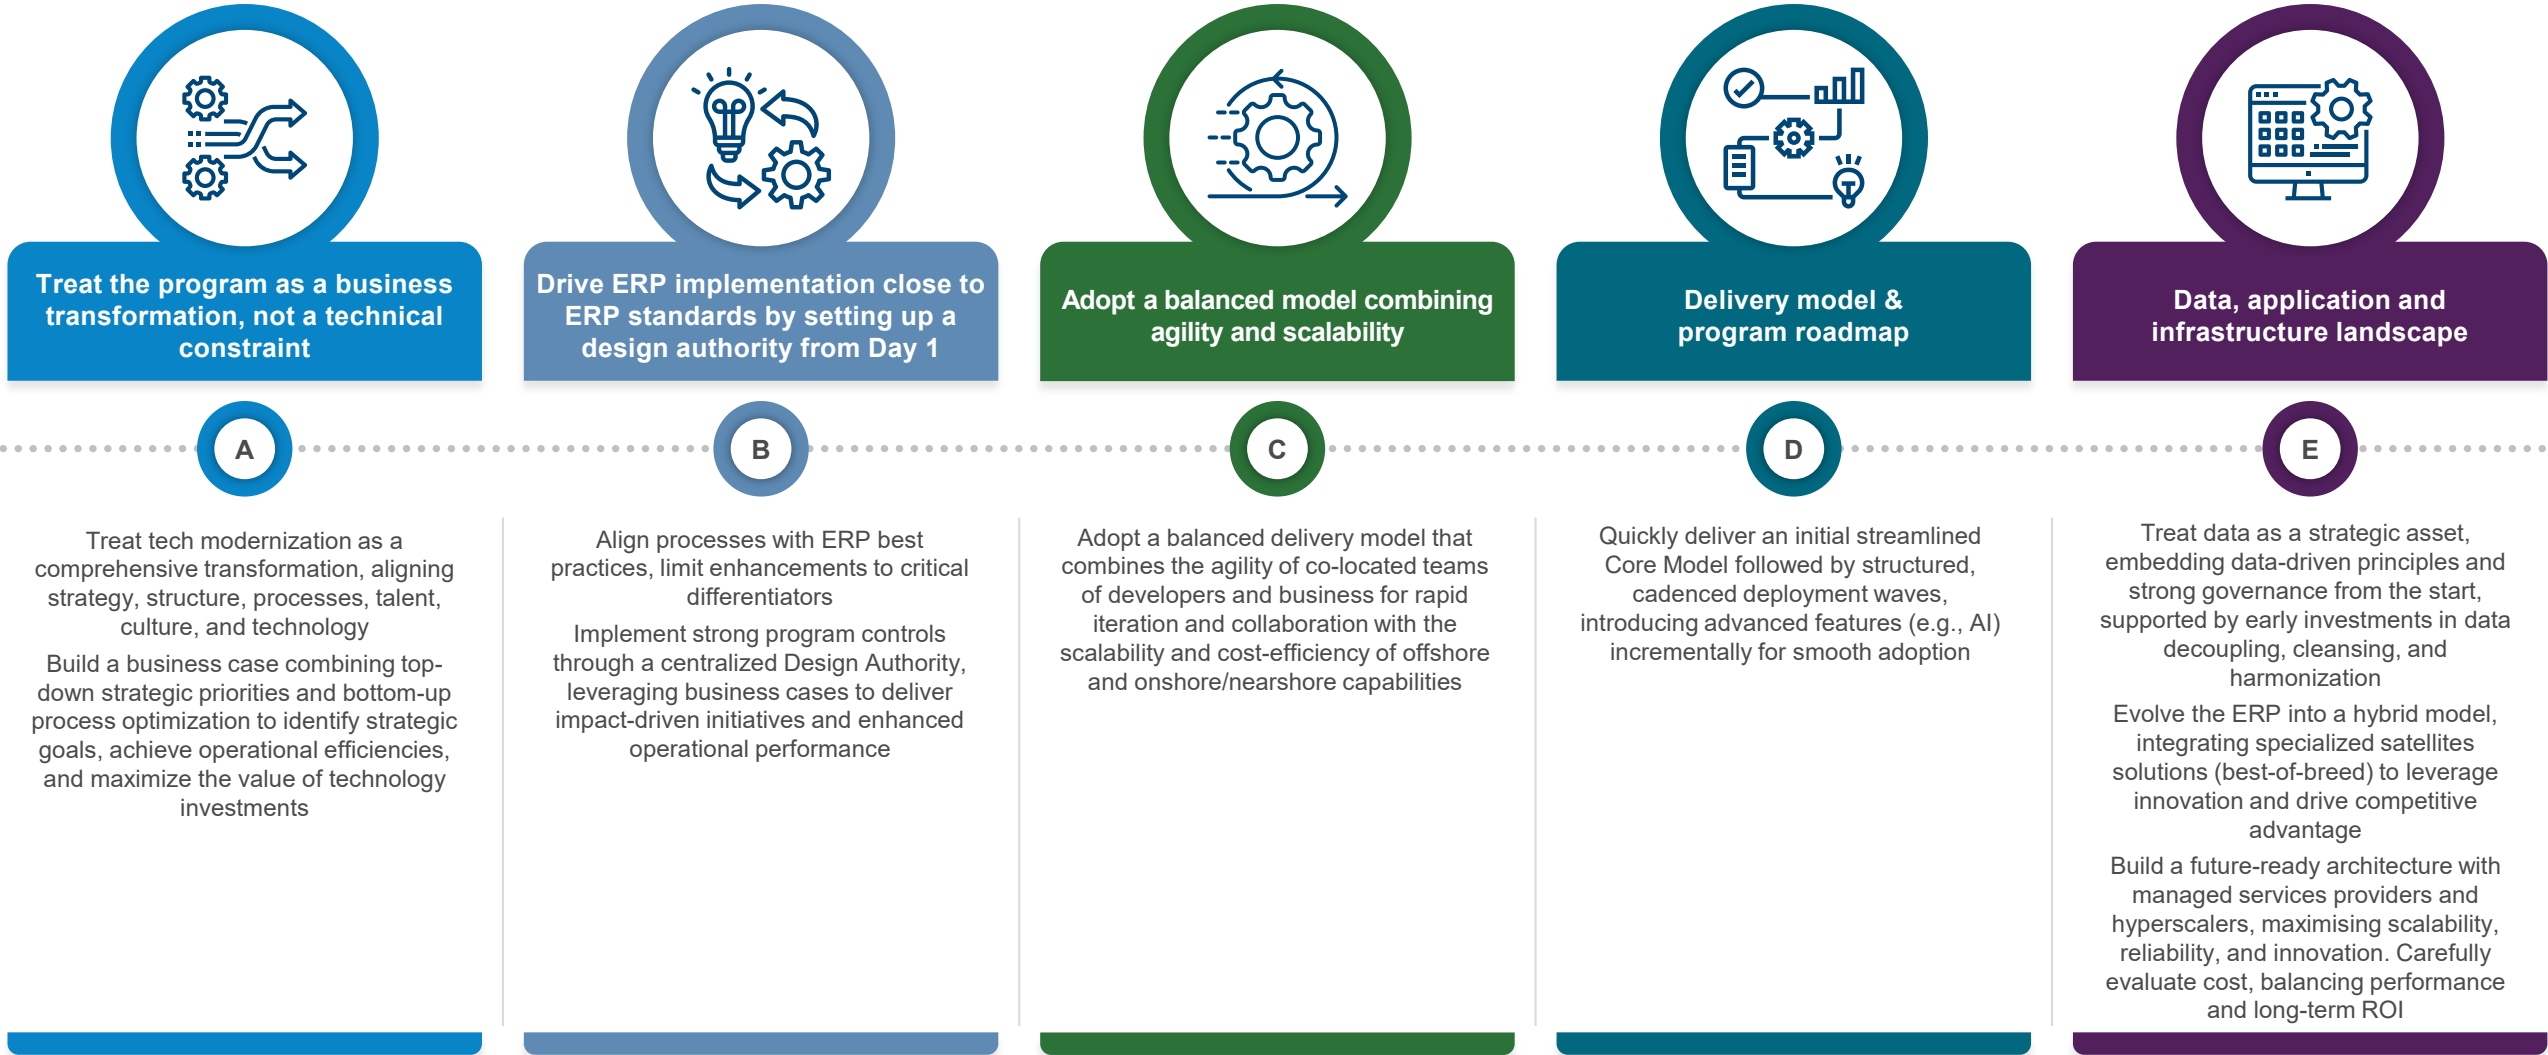

Inexperienced project managers and unskilled project team members lead to heavy dependency on the system integrator.

We recommend a balanced approach across two extreme archetypes

Real world transformations are typically based on a hybrid of the usual ‘brownfield’ and ‘greenfield’ approaches – known as ‘selective transformation’

Our five key convictions for a successful Technology-enabled operating model transformation

De-risk and Recover | A&M acts as an objective, independent value partner ensuring large-scale transformations deliver measurable business impact

What Activities Do We Deliver?

Secure Transformation

- **Independent**, client-side value-led advisor steering delivery parties
- **Executive-level decision framing**, driving focus on critical priorities
- **Capability-building & collaboration**, fostering best practices
- **Enterprise-wide engagement**, ensuring smooth transformation buy-in
- **Effective change management**, enabling seamless adoption and impact

Reduce Cost and Stick to Timeline

- Long term support to steer project **to deliver timeline and budget**
- Reduce elements of the program and challenge system integrator recommendations when appropriate

Realize Benefits

- **Prioritising highest-value initiatives**, ensuring iterative value capture
- **Solving for business impact**, not just technology - maximising ROI

Enforce Project Management Best Practices and Mitigate Risks

- **Transparency & reporting** on milestones, risks, and interdependencies
- **Agile decision-making**, escalating critical issues for resolution
- **Risk mitigation**, proactively addressing roadblocks and uncertainties

Deliver Quality

- **Vendor neutrality**, ensuring optimal integrator & software performance
- **Business requirements validation**, ensuring alignment with objectives
- **Vendor performance oversight**, challenging recommendations when needed
